## V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

### 1. Statement

Novelty (N)	Claims	1-8	YES
	Claims		NO
Inventive step (IS)	Claims	1-8	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-8	YES
	Claims		NO

### 2. Citations and explanations

This report refers to the following document:

D1: US 4 747 100.

Document D1 US 4,747,100 is considered the prior art closest to the subject matter of claim 1. It discloses a network with an interconnection network and a plurality of network nodes coupled to the interconnection network, the nodes sending out preset messages in order to detect nodes that are to be integrated.

In contrast to the closest prior art, claim 1 describes a network wherein a node is provided for integration as active node after receipt of position information for adjusting its local communication timing to that of the reference node and upon completion of a positive check for the consistency of its own communication timing with the communication timing of at least some of the active nodes. This technical feature makes it possible to synchronize the nodes after the network has been started.

The other document cited in the search report does not disclose this feature.

Claim 1 therefore meets the PCT requirements in respect of novelty (PCT Article 33(2)) and inventive step (PCT

Article 33(3)).

Claim 7 describes nodes in a network according to claim 1.

Claim 8 describes the method corresponding to the network according to claim 1.

Claims 7 and 8 therefore also meet the PCT requirements in respect of novelty (PCT Article 33(2)) and inventive step (PCT Article 33(3)).

The same holds true for dependent claims 2 to 6.
